

DID YOU KNOW?

OSHA requires inspections to be done on all cranes and hoists. Regular and routine inspections are not only a mandated requirement, but will also help things run smooth with less interrupted production at your facility. Folske Electrical Services certified inspectors and trained technicians provide an accurate assessment of the condition of your equipment. They evaluate risks, identify improvement opportunities and provide recommendations.

An active preventive maintenance program is crucial to improving safety and productivity. Preventive maintenance can reduce downtime and increase reliability. We create a proactive, customized maintenance plan based on your equipment, application and duty cycle.

Folske Electrical Services and their experienced technicians will work with you to develop an appropriate schedule of frequent, periodic or annual inspections based on the requirements and specifications of your industry. Not only are inspection reports supplied to you, but we use INSPECT ALL mobile software in our office, allowing access to reference information for years to come.
